8. HINTS AND TIPS

WARNING!

Refer to Safety chapters.

The temperature and cooking times in the tables are guidelines only. They depend on the recipes and the quality and quantity of the ingredients used.

8.1 Cooking recommendations

Your oven may bake or roast differently to the oven you had before. The tables below show recommended settings for temperature, cooking time and shelf position for specific types of the food.

If you cannot find the settings for a special recipe, look for the similar one.

8.2 Baking

Use the lower temperature the first time.

You can extend baking times by 10-15 minutes if you bake cakes on more than one shelf position.

Cakes and pastries at different heights do not always brown equally. There is no

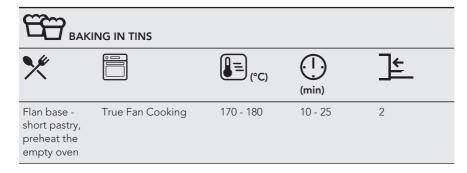

need to change the temperature setting if an unequal browning occurs. The differences equalize during baking.

Trays in the oven can twist during baking. When the trays become cold again, the distortions disappear.

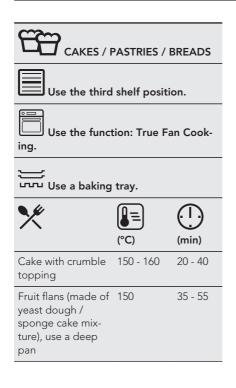

8.3 Tips on baking

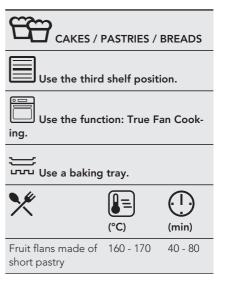

| Baking results | Possible cause | Remedy |
|---|--|--|
| The bottom of the cake is not baked sufficiently. | The shelf position is incorrect. | Put the cake on a lower shelf. |
| The cake sinks and becomes soggy or streaky. | The oven temperature is too high. | Next time set slightly lower oven temperature. |
| | The baking time is too short. | Next time set a longer baking time and lower oven temperature. |
| The cake is too dry. | The oven temperature is too low. | Next time set higher oven temperature. |
| | The baking time is too long. | Next time set shorter baking time. |
| The cake bakes unevenly. | The oven temperature is too high and the baking time is too short. | Set lower oven temperature and longer baking time. |
| | The cake batter is not evenly distributed. | Next time spread the cake batter evenly on the baking tray. |
| The cake is not ready in the baking time specified in a recipe. | The oven temperature is too low. | Next time set a slightly higher oven temperature. |
